How To Stop Rattling Doors Using Rubber Tacks

Now we hate to sound like a broken record, but if the door is still rattling, this is absolutely guaranteed to do the trick.

Utensils

Hammer

Ingredients

Rubber tack button (available at hardware store)

Approximate Time: 5 Minutes

1. With hammer, nail rubber tack into the very highest corner at the top of the latch side of the door facing stop. See Figure 29A.
2. Once nailed into place, the rubber tack button creates a springlike action as it comes in contact with the door, thus eliminating the rattling (Fig. 29B).

Note: We have no further advice if your door continues to rattle. Maybe you should move.
